Fast Computation on Processing Data Warehousing Queries on GPU Devices

by

Sam Cyrus

For the MSCE degree in Computer Science & Engineering

Current DBMS use GPUs as dedicated accelerators to process each individual query, which results in low utilization, low system throughput, and more time of overall query processing. To resolve this problem, this paper suggests a way to transfer all of the desired data into the global memory of GPU and keep it until all queries are executed as one batch. This results in better performance in less time of overall query processing. The execution time is improved by up to 40%.

THE PUBLIC IS INVITED

Examining Committee

Yicheng Tu, Ph.D., Major Professor
Srinivas Katkooi, Ph.D.
Swaroop Ghosh, Ph.D.

Robert Bishop, Ph.D.
Dean, College of Engineering

Dwayne Smith, Ph.D.
Dean, Office of Graduate Studies

Disability Accommodations:
If you require a reasonable accommodation to participate, please contact the Office of Diversity & Equal Opportunity at 813-974-4373 at least five (5) working days prior to the event.
