This form must be completed by the PI, Lab Supervisor, Safety officer or their designee to conduct a laboratory hazard assessment specific to activities in their laboratories. The laboratory hazard assessment identifies hazards to employees, research assistants, undergraduate research assistants, volunteers and specifies personal protective equipment (PPE) to protect them during daily laboratory activities. This assessment consists of two sections. **Section 1:** Laboratory PPE Assessment & **Section 2:** Conduct PPE Training

PIs/Lab supervisors or Safety officers are responsible for enforcing PPE requirements in assigned labs. Department of Chemistry Safety Coordinator and EH&S are available to assist you with completing this form or with reviewing it after you have completed it. EH&S may be consulted by email julie10@usf.edu or by calling 813-974-1106.

**Section 1: Laboratory PPE Hazard Assessment**

In this section, the PI/Lab supervisor, safety officer or designee will:

- Conduct a hazard assessment of the laboratory using the PPE Assessment Tool. The Tool will assist to identify activities when PPE is needed to protect lab personnel from exposure to hazards.
- Certify the hazard assessment for the laboratory by signing the above table.

The following checklist provides an overview of lab activities with associated potential hazards and generic recommendations for PPE.

**Lab-specific PPE policy** – the Principal Investigator or class instructor reserves the right to enforce a more stringent PPE policy than what is described in this document.

| ☐                   | Working with human blood, body fluids, tissues, or bloodborne pathogens (BBP), animal specimens (preserved and unpreserved), or recombinant DNA | Exposure to infectious material or preservatives. Eye or skin irritation. | Lab bench, sink | • Peer-reviewed written procedure (SOP)  
• Job-specific training  
• EH&S Lab & Research Safety Training  
• Biosafety Core Course  
• Follow standard microbiological practices | • Lab coats  
• Nitrile gloves  
• Safety glasses  
• Use goggles for splash protection.  
• Select glove protection for preserved specimens according to type of preservative used |
| ☐                   | Agents associated with human disease (BSL-2) | Exposure to infectious material Routes of transmission include percutaneous injury, ingestion, mucous membrane exposure | Bio Safety Cabinets or other physical containments devices used for all manipulations of agents that can cause splashes or aerosols of infectious materials. | Peer-reviewed written procedure (SOP)  
Job-specific training  
EH&S Lab & Research Safety Training  
Biosafety Core Course  
Limited access, biohazard warning signs  
Sharps precautions | • Lab coats  
• Nitrile gloves  
• Face and eye protection, as needed |
<p>| ☐ | Indigenous or exotic agents (BSL-3) | Exposure to infectious material. May cause serious or potentially lethal disease through the inhalation route exposure. | Bio Safety Cabinets or other physical containments devices used for all manipulations of agents that can cause splashes or aerosols of infectious materials. Facility requirements: • Physical separation from access corridors • Self-closing, double-door access • Exhausted air not recirculated • Negative airflow into laboratory • Entry through airlock or anteroom | Medical surveillance policies. Autoclave must be available. EHS lab &amp; research safety course, Contact USF Biosafety Officer. Hand washing sink near laboratory exit. | • Lab coats • Nitrile gloves • Face and eye protection, as needed |</p>

| ☐                | Working with cryogenics | Major skin, tissue, or eye damage | Store and work with material in a laboratory or laboratory support areas with adequate air exchanges. | • Peer-reviewed written procedure (SOP)  
• Safety Data Sheets (SDS)  
• Job-specific training  
• EH&S Lab and Research training  
• Oxygen monitor if greater than 60 gallons of liquid nitrogen | • Safety glasses or goggles for large volumes  
• Heavy impermeable insulated gloves; lab coat  
• Consider a face shield |
| ☐                | Working with very cold equipment or dry ice | Frostbite, Hypothermia | • Work with material or equipment in a laboratory or laboratory support areas with adequate air exchanges.  
• Allow dry ice to sublimate in certified fume hood or glove box | • Peer-reviewed written procedure (SOP)  
• Safety Data Sheets (SDS)  
• Job-specific training  
• EH&S Lab and Research training  
• Do not store dry ice in cold rooms | • Safety glasses or goggles for large volumes  
Insulated gloves (possibly warm clothing)  
Lab coat |
| ☐                | Working with hot liquids, equipment, or open flames (autoclave, Bunsen burners, water or oil bath) | Burns resulting in skin or eye damage | Work with material in a laboratory or laboratory support areas with adequate air exchanges. | • Peer-reviewed written procedure (SOP)  
• Job-specific training  
• EH&S Lab and Research training  
• Use & maintain equipment as per manufactures guide  
• Do not use mercury containing thermometers | • Safety glasses or goggles for large volumes  
• Insulated gloves (impermeable insulated gloves for liquids, steam)  
Lab coat |
| ☐ | Extreme temperature during field activities | • Sunburn, heat stroke, dehydration  
• Hypothermia, frostbite | • Provide air-conditioned/heated area for rest breaks  
• Consider fans, tents, umbrellas, chemical heat packs  
• Always have fluids available | • Peer-reviewed written procedure (SOP) | • Provide air-conditioned/heated area for rest breaks  
• Consider fans, tents, umbrellas, chemical heat packs  
• Always have fluids available |
| ☐ | Nonhazardous material compressed gas cylinders | Uncontrolled pressure release can cause personal injury or property damage | • Store and work with material in a laboratory or laboratory support areas with adequate air exchanges  
• Secure compressed gas cylinders to a wall or bench by using a mounting bracket | • Peer-reviewed written procedure (SOP)  
• Job-specific training  
• EH&S Lab and Research training  
• Keep regulators in good condition  
• Cap cylinders that are not in use or attached to equipment  
• Keep upright | Safety glasses should be worn when operating a regulator or when using compressed air for cleaning/dusting |
| ☐ | Working with hazardous compressed gas cylinders (flammable, toxic, highly toxic, air reactive, pyrophoric, those without good physiological warning properties) | Uncontrolled pressure release can cause personal injury or property damage; Fire or explosion; poisoning; severe respiratory, eye, and skin irritation | • Store and work with material in a laboratory or laboratory support areas with adequate air exchanges.  
• Secure compressed gas cylinders to a wall or bench mounted bracket.  
• Use and store in a certified chemical fume hood or vented gas cabinet. | • Peer-reviewed written procedure (SOP)  
• Job-specific training  
• EH&S Lab and Research training  
• Keep regulators in good condition  
• Cap cylinders that are not in use or attached to equipment  
• Use a gas detection and alarm system  
• Purchase the lowest concentration of the gas as possible | Safety glasses should be worn when operating a regulator or when using compressed air for cleaning/dusting |
| ☐ | Working with loud equipment, noises, sounds, or alarms, etc. | Potential ear damage and hearing loss | • Lubricate machinery and equipment  
• Place a barrier between the noise source and employee (i.e. sound walls or curtains)  
• Consider vibration isolation system. | Peer-reviewed written procedure (SOP)  
Job-specific training  
EH&S Hearing Conservation Training  
Limit workers’ exposures through techniques such as job-rotation  
Operate noisy machines during times when fewer people are exposed  
Restrict worker presence to a suitable distance | Earplugs or ear muffs in consultation with EH&S Occupational Safety |
| ☐ | Glassware, needles, sharp metal or plastic edges | Laceration, injection, exposure | Use rubber mats in sinks to protect glassware  
Use “safer” sharps | • Peer-reviewed written procedure (SOP)  
• Job-specific training  
• Use plastic disposables | • Heavy rubber gloves for glassware washing  
• Cut-resistant gloves when handling sharps  
• Lab coat |
| ☐ | Working with electrical equipment (exposed electrical conductors, high voltage circuits, energized equipment) | Electrical shock | • Develop & follow task specific SOPs  
• Signs and postings notifying others of the hazard present  
• Inspect power cords prior to use | • Safety glasses  
• Protective gloves |
|☐| Harmful dusts, fumes, mists or vapors | Inhalation, lung damage, eye irritation | • Work with material or equipment in a laboratory or laboratory support areas with adequate air exchanges  
• Local exhaust ventilation | Peer-reviewed written procedure (SOP)  
Job-specific training  
EH&S Lab and Research training or EH&S Shop Safety or EH&S Safety and Compliance in the Arts | • Safety goggles  
• Respirator after consultation with EH&S Industrial Hygiene |
|☐| Manipulation of large objects (lifting) | Back injury  
Crush injury | Use carts and mechanical hoists  
Install conveyor belts and machines that move objects | • EH&S Back Safety Training  
• Proper lifting technique; bend knees | Back support |

Section 2: Conduct PPE Training

PPE training consists of **lab specific training** conducted by the PI or designee. Documentation is required to indicate training has been conducted.

**Step 1**

The PI or designee assures that the employees have completed all applicable safety training courses and university classes.

**Step 2**

a. The PI, lab supervisor, or their designee reviews the **completed Lab PPE Assessment Tool** (this document) with the person that will conduct the experiment. It describes the tasks in the lab when personnel need PPE to protect themselves from exposure to hazards. In this step, the hazard assessment is used as a training tool.

b. While discussing lab activities and the associated hazards with lab personnel, the PI or designee will address how their lab obtains PPE, what types of PPE are used in the lab and for which tasks, where and how the PPE is stored and maintained, how to properly use the PPE, and discuss any limitations of the PPE. The PI or designee should also discuss general PPE safety practices, including not wearing PPE outside of lab hazard areas (e.g. hallways and eating areas).

c. Each member of the research lab will sign below acknowledging that they have reviewed the PPE assessment tool.

**Step 3**

Conduct and document refresher training whenever the hazard assessment is updated.

PPE Hazard Assessment Tool Training Acknowledgement: *I have read, asked questions, and understand the PPE requirements for the activity/materials described herein.*
