Psychosocial Stress, Coping & Cognitive Outcomes: Gender Differences among Black Men & Women.

Dr. Tanisha Hill-Jarrett, an Assistant Professor in the USF Department of Neurosurgery and Brain Repair, received the New Researcher Grant from USF for a study on psychosocial stress, coping, and cognitive outcomes in older Black Adults. The study proposes a mediation model which examines the effects of coping style on the relationship between psychosocial stressors (racism, gendered racism) experienced by Black Americans and cognition. Survey and cognitive data will be collected on 150 older, Black men and women. Multiple group mediation analyses will test whether the relationship between psychosocial stress (racism, gendered racism), coping style, and cognition differs by gender. *Best of luck to Dr. Hill-Jarrett on this project!*
