### Intersectional Analysis of Manhood and Masculinity Ideology by Jude Sullivan

This honors thesis took an intersectional approach in investigating how racial/ethnic and sexual orientation identities interact in influencing men's self-views of their own manhood. Men's self-views of masculinity differed between men with two marginalized identities (i.e. non-heterosexual men of color) and men with no or one marginalized identity. Non-heterosexual men of color rated themselves highest in communality and weakness while heterosexual White men displayed the lowest ratings. The results suggest that race/ethnicity and sexual orientation both influence men's conceptualization of manhood and masculinity when evaluating the self in relation to others.
