

## Bachelor of Science in Information Studies

The Information Studies program integrates a strong foundation in information technology as well as an understanding of human, organizational, policy and other issues. The goal is to prepare students for leadership careers in a wide array of environments and contexts related to the emerging knowledge economy in Florida and beyond, from e-commerce, to leading IT teams, or as preparation for advanced careers in information architecture, health informatics or other areas. While the degree necessarily provides students with in-depth technical knowledge and skills, emphasis is given to understanding how people interact with information and technology, and other complexities of the information society.
