 California, Riverside, School of Medicine

## **MAIN FINDINGS**

- Building a strong rapport with community advisory board members (CAB) helped build cohesion, a shared group identity, and a sense of investment in the success of the project.
- Active recruitment methods were the most effective when developing the CAB.
- The CAB helped us improve each step of the study and recruit study participants.

INTRODUCTION         RESULTS           • Older people living with HIV (PLWH) face unique health         We recruited 24 CAB members from all three site	
order people ining with the (i Evrif) race and a reaction	
challenges Los Angeles, CA (9), Palm Springs, CA (8), and Tar	mpa, FL (7)
<ul> <li>COVID-19 has increased the prevalence of depression</li> <li>Characteristics (N = 23*)</li> </ul>	n (%)
and social isolation Age, mean (range)	61 (48-79)
Facilitate social connections by creating a virtual village     Race/ethnicity – select all the apply

AIM #2: Co-develop ideas for what to include in a virtual village

Use conjoint analysis to identify the most important characteristics of the virtual village

Create and pilot the virtual village with PLWH age 50+ at all three study sites

Scan the QR code to access more details about our study.

CAB feedback guides all steps of the study.

CAB members have helped design:

- interview guides for focus groups and key informant interviews (question categories: coping during COVID-19, health issues, isolation, and virtual village)
- the assessment for conjoint analysis
- project name: Positive Connections 50+ (PC50+)
- project logo
