*Estimation of Human Pose Categories and Physical Object Properties
from Motion Trajectories*

by
Mona Fathollahi

For the Ph.D. degree in Computer Science & Engineering

It is essential for the autonomous cars to infer the intent of the pedestrians to avoid collisions. Estimating orientation of pedestrians with respect to the on-board camera is a first step towards this goal. We present computer vision based algorithms implemented using Deep Learning network architectures, ConvNet and Recurrent Neural Network, to estimate body orientation from still images and videos of pedestrians. We also present methods to estimate fine-grained 3D position of body joints from image as well as dynamic properties of falling objects from their motion trajectories.

ENB 313

Examining Committee

Stephen Sadow, Ph.D., Chairperson

Rangachar Kasturi, Ph.D., Co-Major Professor

Sudeep Sarkar, Ph.D., Co-Major Professor

Dmitry Goldgof, Ph.D.

Richard Gitlin, Ph.D.

Toru Shimizu, Ph.D.

*Robert Bishop, Ph.D.
Dean, College of Engineering*

*Dwayne Smith, Ph.D.
Dean, Office of Graduate Studies*

Disability Accommodations:

*If you require a reasonable accommodation to participate, please contact the
Office of Diversity & Equal Opportunity at 813-974-4373 at least five (5) working days prior to the event.*
