Major Research Area Paper Presentation

Energy-Aware Data Storage and In-Memory Parallel Joins in Database Systems

by
Peyman Behzadnia

For the Ph.D. degree in Computer Science & Engineering

Energy consumption has become a first-class optimization goal in database management systems (DBMS) and the data storage system is one of the essential components of database.

We study the research proposals on designing an energy-aware disk storage system.

Furthermore, given that the join operation is one of the most important and expensive operations in data stream management systems (DSMS) as well as database query workloads, we study the parallelization techniques of stream joins and database joins on multi-core CPUs.

April 6th, 2017

1 pm – 2 pm

ENB 313

THE PUBLIC IS INVITED

Examining Committee

Yi-Cheng Tu, Ph.D., Major Professor

Ken Christensen, Ph.D.

Adriana Iamnitchi, Ph.D.

Bo Zeng, Ph.D.

Ming Ji, Ph.D.

Miguel Labrador, Ph.D.

Graduate Program Director

Computer Science and Engineering

College of Engineering

Sudeep Sarkar, Ph.D.

Department Chair

Computer Science and Engineering

College of Engineering

Disability Accommodations:

If you require a reasonable accommodation to participate, please contact the Office of Diversity & Equal Opportunity at 813-974-4373 at least five (5) working days prior to the event.
