The Tampa Bay Technology Incubator (TBTI) is one vehicle through which USF CONNECT grows successful companies. TBTI supports technology research as a catalyst for economic development and advocates the creation and development of facilities for high-technology companies and related support functions. One way TBTI is able to assist is by providing access to costly critical research equipment. Many companies originate in the community and seek our support to evolve their concepts to commercialization.

The Student Innovation Incubator (SII) is a shared workspace and a collaborative business environment for University of South Florida students from all graduate and undergraduate disciplines to create and grow new businesses. SII provides access to resources such as mentors, space, and business guidance to facilitate entrepreneurship and ignite job growth.

Florida’s High Tech Corridor spans 23 counties in the central part of the state and is anchored by three research universities, including USF. Its mission is to grow high tech industry and innovation through partnerships that support research, marketing, workforce and entrepreneurship.
